

PRELUDE

Termiticide/Insecticide

Premium quality, broad spectrum control.

For many years
Prelude was one of
the most popular
termiticides on the
market and is still
used by many PMPs.

PRODUCT DESCRIPTION

Prelude is a premium, general-use pesticide. It is an excellent choice for the PMP who is concerned about applicator comfort. Unlike many other synthetic pyrethroids, there are almost no skin sensitivity issues with Prelude. Other reasons so many PMPs prefer Prelude are its ability to hold up in the desert-like soils of the Southwest and that it does not “layer” in cold weather or separate after mixing.

APPROVED USE

Prelude is labeled for use on more than 60 insects, including ants, aphids, chinch bugs, cockroaches, spiders, scorpions, bedbugs, houseflies, stable flies, fleas, ticks and subterranean termites. Prelude is an excellent choice for application on carpets to control fleas.

APPLICATION TECHNIQUES

- Mix with water only
- Indoor and outdoor use
- Not labeled for food handling
- Crack and crevice
- Surface spray
- Carpet spray
- Outdoor broadcast spray

FEATURES

- Can be mixed with insect growth regulators such as Surge™ containing NyLar® IGR and quick-killing adulticides such as Demize EC
- Almost no skin sensitivity issues for applicator
- Does not “layer” in cold weather or separate after mixing
- Requires little agitation
- Extremely low odor
